

Installation Notes – SAE Certified professional installers strongly recommended:

1. American Technology Components, Inc. requires using proven, sealed terminal connections when accessing OEM sourced wires. The use of non-sealed connections could affect performance and will void product warranty.
2. Before attempting to install, review all vehicle-related OEM circuits and guidelines.
3. Following complete understanding of vehicle-related, OEM wiring guidelines, gather required materials and determine plan.
4. Reference label on Stop Logic Module and below illustration for connection points.
5. Upon making each connection, validate connection integrity and protection.
6. Test to ensure correct, intended performance with and without a trailer connected.
